

std::false_type

```
classDiagram
    class std_false_type["std::false_type"]
    class cudf_is_host_span_supported_container["cudf::is_host_span_supported_container< T >"]
    cudf_is_host_span_supported_container --|> std_false_type
```

The diagram illustrates a class hierarchy. At the top is a white box representing the `std::false_type` class, which is divided into three horizontal sections. The top section contains the text `std::false_type`, while the middle and bottom sections are empty. Below this box is a blue arrow pointing upwards, indicating inheritance. At the bottom is a gray box representing the `cudf::is_host_span_supported_container< T >` class, also divided into three horizontal sections. The top section contains the text `cudf::is_host_span_supported_container< T >`, while the middle and bottom sections are empty. The gray box is shaded darker than the white box above it.

cudf::is_host_span
_supported_container< T >
